

# Unified Digital Platform

## Platform architecture & sitemap

One powerful, unified digital platform housing three complete systems, each with its own dedicated routes and pages: a public marketing website, a secure client portal, and an internal finance dashboard - protected by two-factor authentication and a managed cloud backend.

# 1. Platform overview

The HOU INC Unified Digital Platform is one powerful system built on React + TypeScript. It houses three platforms - each with its own dedicated routes, pages, and layout shell - served by a secure cloud backend with two-factor authentication.

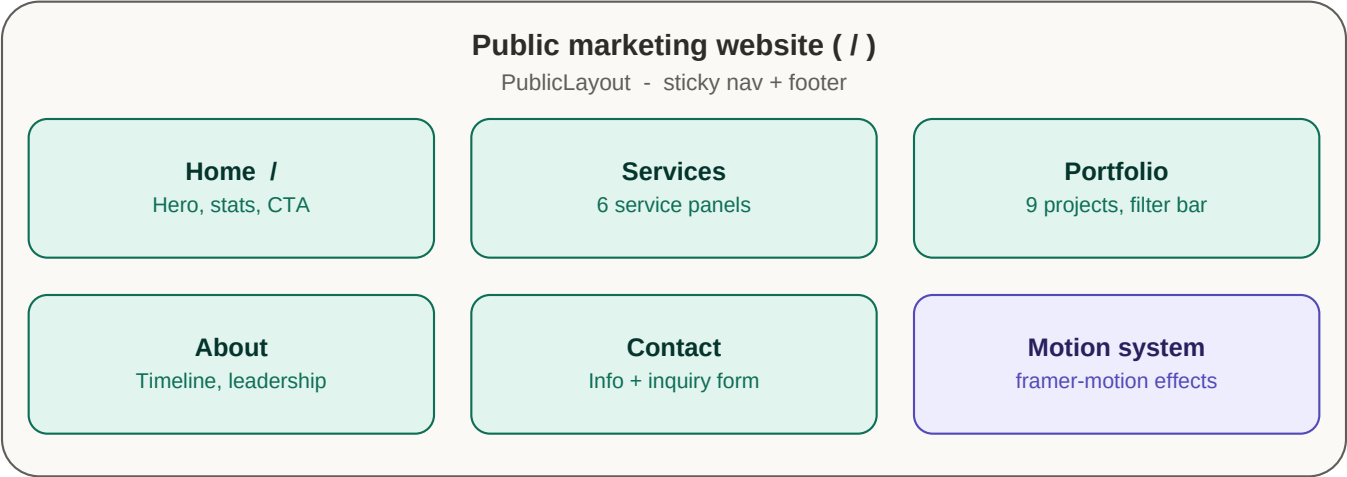

| Sub-platform      | Route    | Audience              | Layout shell | Auth               |
|-------------------|----------|-----------------------|--------------|--------------------|
| Marketing website | /        | Prospective clients   | PublicLayout | Public access      |
| Client portal     | /portal  | Construction clients  | PortalLayout | Secure login + 2FA |
| Finance dashboard | /finance | Internal finance team | AppShell     | Role-based + 2FA   |

All three platforms share one secure backend - hosted on Google Firebase or Supabase - protected by two-factor authentication and role-based access control. Each section that follows maps one platform in full, page by page.

## 2. Public marketing website ( / )

The public-facing site for prospective clients browsing houinc.com. Five pages render inside PublicLayout (sticky navigation header and footer), animated by a shared framer-motion system.

**Home ( / )** Animated hero, ticker marquee, about intro, three service cards, four project cards, stats counter, four-step process, portal CTA band, and a dark CTA section.

**Services** Six service panels: Luxury Custom Homes, Commercial, Shopping Centers & Retail, High-Rise Residential, Industrial & Warehouse, and Renovation & Repositioning, plus a capabilities grid.

**Portfolio** Nine portfolio project cards with a category filter bar.

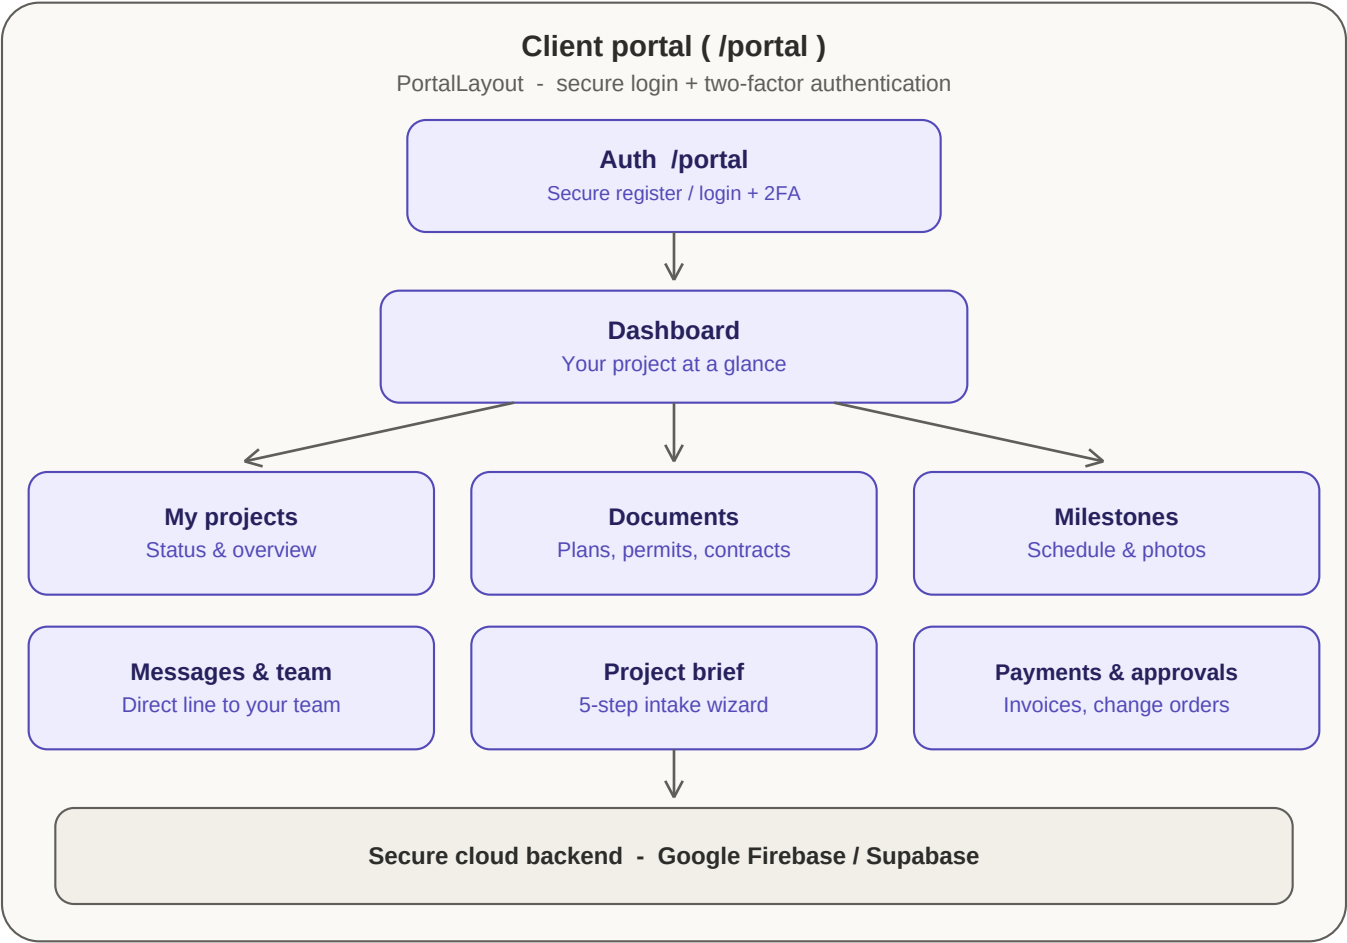

**About** Hero, mission quote, four company values (Excellence, Integrity, Innovation, Customer Service), milestone timeline, six leadership cards, and a closing CTA.

**Contact** Split layout: contact information panel (address, phone, email, hours) alongside a project inquiry form capturing project type, budget, and message.

**Motion system** Reveal, AnimatedCounter, Marquee, MagneticButton, and TiltCard components, all built on framer-motion and reused across every public page.

### 3. Client portal ( /portal )

A secure, full-service portal where residential and commercial clients manage every aspect of their project and stay connected with the HOU INC team. Access is protected by two-factor authentication, and every page renders inside PortalLayout (fixed sidebar on desktop, drawer on mobile).

**Secure access** Registration and login protected by two-factor authentication and encrypted sessions.

**Dashboard** Live project status tracker, your dedicated project team, quick actions, recent messages.

**My projects** Every active project with status, key dates, and a budget summary at a glance.

**Documents** Plans, permits, contracts, and change orders, organized by project.

**Milestones** A visual construction schedule with progress photo updates at every stage.

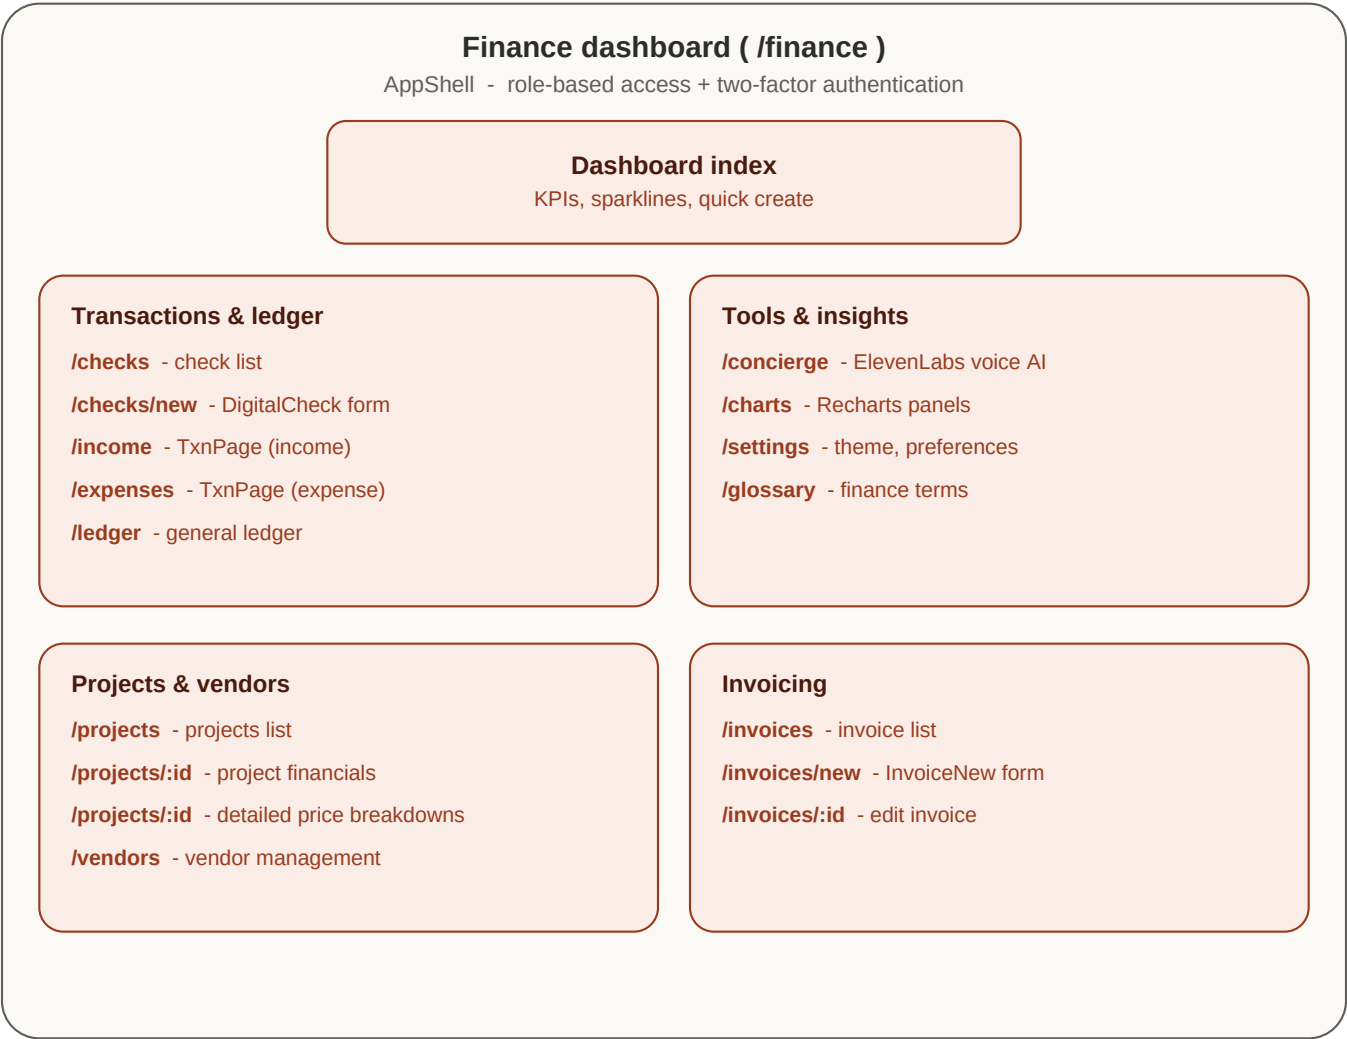

**Messages & team** A direct line to your project team, with smart replies and quick prompts.

**Project brief** Five-step intake wizard: details, location, budget & timeline, style, review.

**Payments & approvals** Invoices, selections, and change-order approvals in one place.

## 4. Finance dashboard ( /finance )

The internal workspace for the HOU INC finance team: sixteen protected routes inside the AppShell sidebar layout, grouped below into four functional clusters under the dashboard index.

**Detailed price breakdowns** Every project includes a full price breakdown - line-item costs, budgets vs. actuals, and running totals - inside its financial view.

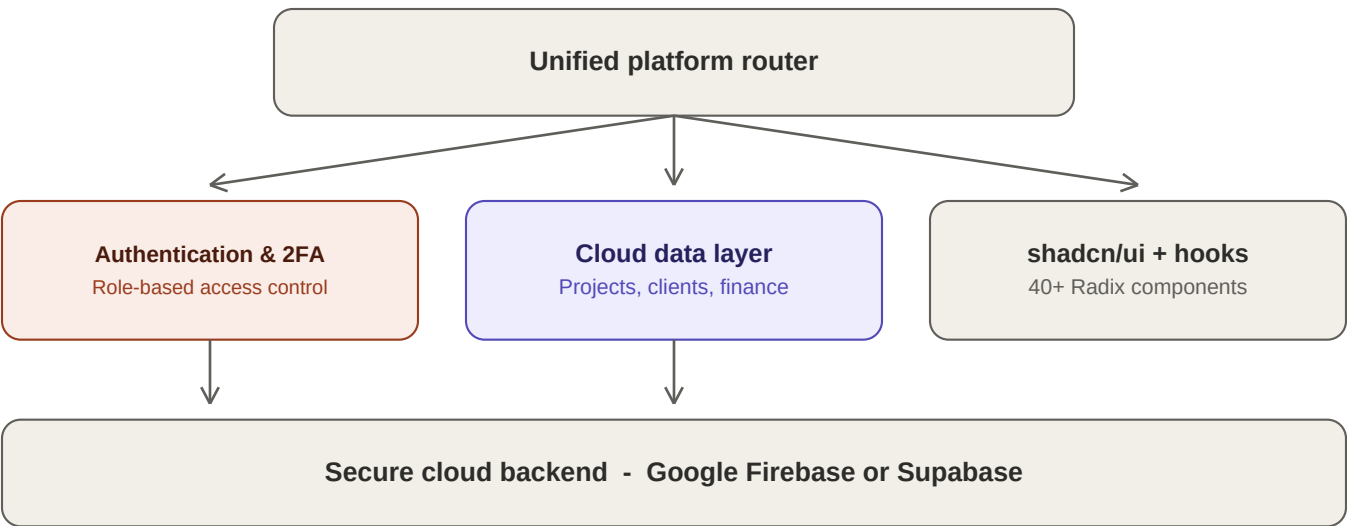

**Access control** Every finance route is protected by role-based access and two-factor authentication; unauthorized visitors are redirected to a secure login.

**Data hooks** `useFinance`, `useInvoices`, `useIntegrations`, `useAuth`, and `useTheme` power the section's state.

**Special features** The `ElevenLabsAgent` component drives the voice AI concierge; charts are built with `Recharts` (`StatChartPanel`, `FinancialChartPanel`); a dark/light theme system runs via `useTheme`.

## 5. Shared infrastructure & technology stack

All three platforms run on common, enterprise-grade plumbing: one unified router, shared authentication with two-factor security, a single component library, and a managed cloud backend.

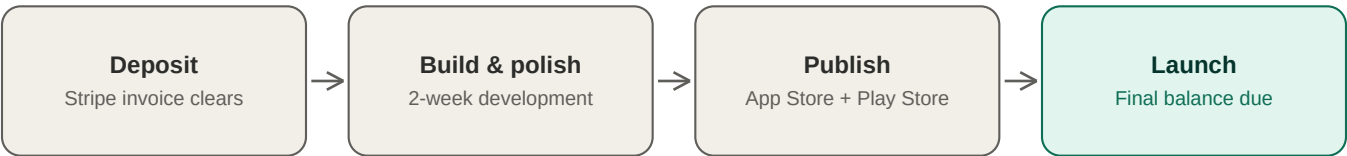

### Technology stack

| Layer                | Technologies                                                   |
|----------------------|----------------------------------------------------------------|
| ● Core framework     | React 18, TypeScript, Vite                                     |
| ● Styling & motion   | TailwindCSS, Radix UI / shadcn (40+ components), framer-motion |
| ● Routing & data     | React Router v6, Google Firebase or Supabase cloud backend     |
| ● Security           | Two-factor authentication, role-based access, encrypted data   |
| ● Visualization & AI | Recharts, ElevenLabs voice AI                                  |
| ● Utility hooks      | useSound, use-mobile, use-toast                                |

The platform is served by a managed cloud backend - Google Firebase or Supabase - with two-factor authentication, role-based access control, and data encrypted in transit and at rest. This foundation scales seamlessly as HOU INC's projects, clients, and data grow.

## 6. Delivery, publishing & next steps

Prepared for Jeff Ali, HOU INC. This section outlines how the Unified Digital Platform moves from approval to launch, and what is required to begin.

**Cross-device experience** Fully responsive and accessible on every device: mobile, tablet, and desktop.

**Private publishing** Once the full platform is complete, Cardinal Consulting will publish it to the Apple App Store and Google Play Store for private usage.

**Compliance & security** Cardinal Consulting will ensure full compliance and a hardened security setup protecting the platform and all access to it.

**Development timeline** Two weeks total to develop and polish the complete platform.

**Engagement status** Development begins once the deposit invoice (via Stripe) has cleared and all details are confirmed accurate. The remaining balance is due when the project is complete and prepared to launch.
